Date: 4th September 2006

Re: CEDAR Cambridge 'Q'
CEDAR Cambridge V3
ProDIFF-88 I/O board

From February 2003 until November 2004, CEDAR Audio supplied the ProDIFF-88 card as an 8-channel AES/EBU I/O option for the CEDAR Cambridge system, versions 1.0, 1.1 and 1.2. Since November 2004, the company has supplied the Lynx-AES16 card as its 8-channel AES/EBU I/O option.

We believe that owners of existing systems with the ProDIFF-88 installed should experience no problems when upgrading v1.x and v2.x systems to Cambridge V3 on existing hardware. However, with the release of the CEDAR Cambridge 'Q' hardware and V3 software in September 2006, we cannot guarantee that the ProDIFF-88 card is fully compatible. Therefore, the ProDIFF-88 is no longer supported as of this date.

This Lynx-AES16 card remains compatible with CEDAR Cambridge 'Q' and V3, and continues to be supported.

For further information, please contact Clive Osborn at CEDAR Audio Ltd.
